

Configure the browser to open PDF files in an Acrobat window

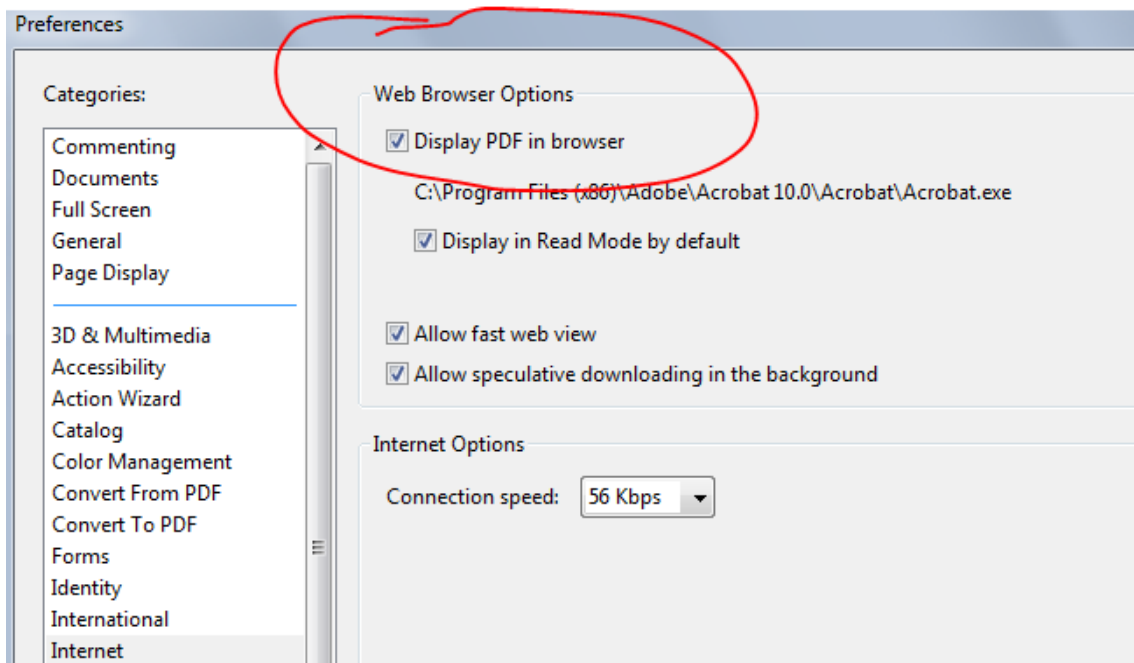

If you want the browser to open PDF files in a separate Acrobat window, configure it to use Acrobat or Adobe Reader as a helper application. Then, when you select a PDF file in Internet Explorer (or whatever browser you are using), the browser opens the PDF file in an Acrobat window instead of the browser.

To configure the browser to use Acrobat or Adobe Reader to open PDF files, do the following:

1. Quit Internet Explorer (or whatever browser you are using).
2. Start Acrobat or Adobe Reader.
3. Choose Edit > Preferences.

4. Select Internet in the list on the left.

5. Select Display PDF in Browser, and click OK.
6. Restart Internet Explorer (or whatever browser you are using).

Note: The next time you select a link to a PDF file, the browser may prompt you to open or save the file. If you choose to open the file, the browser opens the file in the helper application that you specified. If you choose to save the file, the browser downloads the file to the hard disk.

For more information about the general preferences in Acrobat or Acrobat Reader, see the Acrobat Help.
